

TGL2201-SM

Wideband Dual Stage VPIN Limiter

Product Overview

Qorvo's TGL2201-SM is a packaged dual stage Limiter fabricated on Qorvo's proven GaAs VPIN process. Operating over 2 to 12 GHz, the TGL2201-SM provided the limiting action at high input signal levels and low loss at small signal.

The TGL2201-SM is suitable for a variety of wideband systems such as LNA/receiver protection in radars, phased arrays and jammers.

Lead-free and RoHS compliant.

Evaluation Board (EVB) Layout & Mounting Detail

Mounting Detail

Notes:

1. Top RF layer is 0.008" thick Rogers RO4003, $\epsilon_r = 3.55$. Metal layers are 1-oz copper. Microstrip 50 Ω line width is .0174". The microstrip line tapers to a 0.014" width at the connector interface. This PCB is designed for the Southwest Microwave end launch connector 1092-01A-5.
2. The pad pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
3. Ground / thermal vias are critical for the proper performance of this device. Vias should use a .35mm (#80 / .0135") diameter drill and have a final plated thru diameter of 0.25 mm (.010").
4. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.

Pin Configuration and Description

Pin Description

Pin No.	Symbol	Description
1, 4, 9, 12	GND	Ground; Pins 1,4,9, and12 connected to 17 (backside paddle) inside package.
2, 3, 5, 8, 10, 11, 13, 16	N/C	No internal connection; may be grounded or left open on PCB
6, 7	RF IN/OUT	Input or output, matched to 50 ohms
14, 15	RF OUT/IN	Output or input, matched to 50 ohms
17	GND	On PCB, multiple vias should be employed under 17 to minimize inductance and thermal resistance; see page 8 for suggested mounting configuration.
