

Temperature Compensated Directional RMS Power Detector 6 - 18 GHz

Rev. V1

Features

- Integrated Directional Coupler
- Low Insertion Loss: 0.3 dB @ 12 GHz
- Min. detectable power: -17 dBm @ 12 GHz
- Dynamic range: 45 dB @ 12 GHz
- Built-In Temperature Compensation
- Lead-Free 1.5 x 1.2 mm 6-Lead TDFN Pkg
- Halogen-Free "Green" Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description

The MACP-010562 belongs to a series of small, easy-to-use, broadband, directional detectors. With integrated low loss directional couplers and built-in temperature compensation circuits, these detectors provide an easy way to monitor the power of a signal travelling in a specific direction along a transmission line. Detectors are housed in a miniature, surface mount, lead less plastic package. They require a small amount of bias for proper performance. The total bias current is less than 0.5 mA.

Typical applications include power monitoring and leveling in Point-to-Point radios, IMS, Radar, VSAT, EW, and Aerospace & Defense systems.

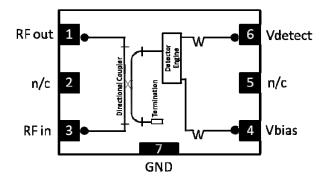

The surface mount package is small yet can be handled and placed with standard pick and place assembly equipment. Detectors are fabricated on a well established GaAs process featuring full passivation for performance and reliability.

Pin Configuration ³

Pin No.	Pin Name	Description		
1	RF _{OUT}	RF Output		
2	N/C No Connection			
3	RF _{IN} RF Input			
4	V bias	Bias Voltage		
5	N/C No Connection			
6	V detect	Output Voltage		
7	GND	Ground		

3. Pins 2 and 5 are not connected internally and should not be used for grounding. Package has exposed bottom metal paddle (Pin 7) which should be connected to the circuit ground. The parasitic inductance introduced by this connection should be as small as possible.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.

Application Information

The MACP-010562 is designed to deliver high performance and to be easy to use.

No external components are needed. The RF connections required by the MACP-010562 are shown in a schematic below.

Pin 3 should be connected to the RF line bringing the input signal. Pin 1 is the RF output. The third

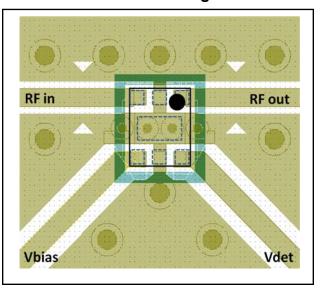

required connection is that to the RF ground. The exposed metal paddle on the back of the package must be connected to the RF ground of the board housing the detector. This can be accomplished by using conductive via holes. It is important to ensure that the parasitic inductance associated with the connection between the detector and the RF ground is as small as possible. The RF ground also provides

DC Bias

The MACP-010562 operates with a positive 3.2 V bias applied to Pin 4. The output voltage is available on Pin 6.

Recommended PCB Configuration

Evaluation Board

MA-COM Technology Solutions' will supply an evaluation board and loose samples upon qualified request. The kit consists of a PCB and SMA connectors. MA-COM Technology Solutions' suggests a Rogers 4350 dielectric of .008" (0.20 mm) with ½ ounce copper. Proper grounding is always important, we suggest 8 mil (0.20 mm) vias placed generously underneath the part.
