

**Features**

- 50MHz to 1000MHz Operation
- Internally Matched Input and Output
- 20dB Small Signal Gain
- 1.5dB Noise Figure
- +24dBm Output Power
- Single 5V to 9V Positive Power Supply

**Applications**

- CATV Distribution Amplifiers
- Cable Modems
- Broadband Gain Blocks
- Laser Diode Driver
- Return Channel Amplifier
- Base Stations

Functional Block Diagram

**Product Description**

The CXE-2089Z is a general purpose, low-cost, high-linearity RF amplifier IC. The device is manufactured on a Gallium Arsenide process and is featured in a small SOT-89 package. It has been designed for use as an easily cascadable 75Ω gain block with a noise figure of less than 2dB. Gain flatness better than 0.5dB from 50MHz to 1000MHz, and high linearity make this part ideal for cable TV applications. Other applications include IF and RF amplification in wireless voice and data communication products operating in the 50MHz to 1000MHz frequency range. The device is self-contained with 75Ω input and output impedances providing less than 2:1 VSWR matching. For higher input and output return losses, see the evaluation schematic.

## Absolute Maximum Ratings

Parameter	Rating	Unit
Device Current	175	mA
Device Voltage	9	V
Input RF Power	+10	dBm
Output Load VSWR	20:1	
Ambient Operating Temperature	-40 to +85*	°C
Storage Temperature	-40 to +150	°C

\*Note: Case Temperature

**Caution!** ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

## Application Note

Due to design characteristics of the CXE-2089Z Linear Gain Amplifier, improvements in multi-tone distortion performance will be seen with increased operating current up to 130mA. Degradation in multi-tone distortion may be seen when operating at current levels below 105 mA.

Pin	Function	Description
1	RF IN	RF Input Pin. This pin requires the use of an external DC-blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible.
3	RF OUT/BIAS	RF Output and bias pin. DC-voltage is present on this pin, therefore a DC-blocking capacitor is necessary for proper operation.

## Application Schematic - 50Ω and 75Ω 50MHz to 1000MHz Linear Driver

## Application Circuit Component Values

Reference Designator	Description
JP1	3 Pin Polarized C onnector - ITW Pancon
J1, J3	Coax F - Trompeter Electronics SMA - Heilind Electronics
L1	1 uH - Coilcraft
L2	10 nH - Toko America
C1	1 uF - Panasonic Industrial
C3, C4	10000 pF - Panasonic Industrial
C2	1200 pF - Panasonic Industrial
C6	1.8 pF - Taiyo Yuden
