

General Description

The Qorvo QPD1022 is a 10 W (P_{3dB}) discrete GaN on SiC HEMT which operates from DC to 12 GHz. This wideband device is a single stage unmatched power amplifier transistor in an over-molded plastic package. The wide bandwidth of the QPD1022 makes it suitable for many different applications from DC to 12 GHz.

The device is housed in an industry-standard 3 x 3 mm surface mount QFN package.

Lead-free and ROHS compliant

Evaluation boards are available upon request.
